

It is disgusting for BellSouth to make it seem that there are wide options for consumers for so-called broadband Internet access. My family has lived at our location for more than twenty years and we are completely locked into DSL access from only ISPs that use BellSouth facilities. I have reviewed our options at least once a year for the last 7 years and even visited a Miramar City commissioner about 4 years ago to ask why the city allowed TCI which became AT&T which became Comcast perpetual monopolies on cable access here without demanding Internet access options via their cable. Seven years ago there were flyers distributed to residents about fiber optic digital futures for all of us via cable and all we can get is more expensive programming packages and no Internet. Satellite is ludicrously expensive and slow. Broadband over powerlines is non-existent and creates ridiculous interference which we don't need more of. Tell BellSouth to shove their petition to bless the monopoly on Internet access they practically already have and do something about growing or creating real options for consumers in the USA so we don't keep sliding into obsolescence compared to Europe and Asia!!!
